What is Enhanced View?

Enhanced View is an improved look and feel for Cerner Power Chart that, in addition to offering improved usability and a streamlined interface, offers these additional improvements:

- Convenient access to frequently used features, such as the patient search.
- The ability to add custom icons that link to internet-based resources.
- Limited customization to better suit workflow and user preference.

Sign Up

To have Enhanced View turned on for your Cerner login, call the Physician Support line at 419-6264.

The Toolbar: An Enhanced View Basic

Instead of using tabs, Enhanced View uses toolbars. Below is a summary of the toolbar and its parts.

Patient Search, ‘As Of’ Button

The Patient Search functionality has improved significantly with Enhanced View. Instead of clicking the Find Patient icon to open the search window, you can now search directly from your Organizer by using the Search box at the right of the screen.

The search box allows you to search for a patient using a Lastname, Firstname format without having to use the patient search window. If you are searching by Medical Record number, FIN, or another identifier, you can still open the search window by clicking the Binocular icon at the right.

The Recent icon to the left of the search window keeps a record of your five most recently viewed charts, allowing you to quickly access your last viewed charts.

The As Of button, which refreshed the screen, is now found underneath the search box, and will display how many minutes have passed since the screen was last refreshed.

Patient Chart

Instead of using tabs to navigate within the patient chart, you will now use the Menu tab at the left of the chart. To open the menu, roll your mouse over the Menu tab.

Allowing the Menu to slide in and out will give you the most available screen space for viewing the contents of the chart. If you would like the menu to remain visible, though, you can do so by clicking the Tack button at the right of the menu header.

If you do not like the Menu, you can also access the various pieces of the patient chart by using the Chart menu at the top of the screen.

You may also notice that Enhanced View allows you to open up to three patient charts at once. Open charts are visible as tabs above the patient demographics bar, and look like this:
Navigation

Enhanced View replaces the tabs used to navigate between your Patient List and Inbox with a toolbar, like the one seen below.

Additional toolbars contain your available icons as well as your external links, which are discussed later in this guide.

If you can't find what you are looking for on a toolbar, you may be able to find it by clicking on the drop down arrow found at the right of the toolbar, as seen in the this screenshot.

Though the methods you will use to navigate have changed, the Patient List and Inbox will continue to look and function as they currently do.

Adding Custom Links

Enhanced View allows you to add your own custom links to internet-based resources that you may use. To add your own custom link, follow the steps below.

1. From the Organizer, click the Drop down Arrow of any of your toolbars and select the Add or Remove Buttons > Customize option.

   ![Customize Option](image)

2. In the new window, click the Add button.
3. In the new Add User Links window, type the name for the link (e.g. “Google”) and the full address of the link (e.g. “http://www.google.com”).
4. Click the OK button.
5. If desired, repeat the above steps to add another link. When finished, click the Close button.
6. Your links will now appear on the Applications toolbar. By default, this is the second toolbar.
